

gd4Tg/+ (AB) (CZRC Catalog ID: CZ 258)

Nature of the mutation

The *gd4Tg* allele is a transgenic zebrafish line *Gt(vclb:vclb-EGFP)* with green fluorescent protein expression in the somite.

Genotyping assay

Genotyping of the *gd4Tg* allele is based on the fluorescent microscopy. At 36 hpf, the *Gt(vclb:vclb-EGFP)* is expressed green fluorescent protein in the somite.

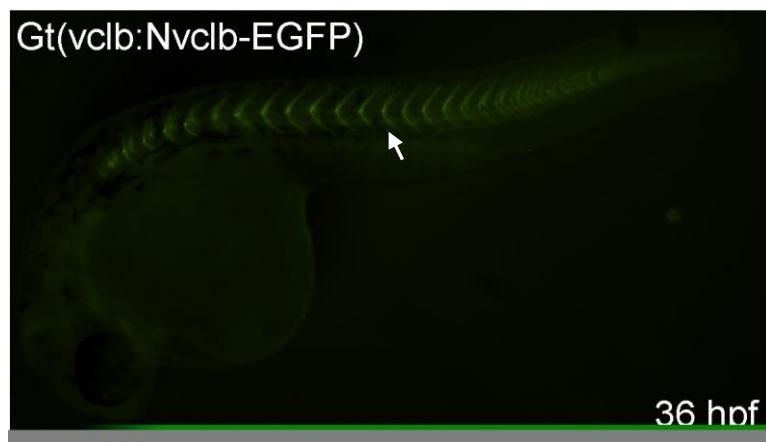

Figure. The green fluorescent protein expression in somite in *Gt(vclb:vclb-EGFP)* line. The figure show the lateral view of *Gt(vclb:vclb-EGFP)* embryos at 36 hpf,. The arrow shows the expressed GFP in somite.
